

A NOTE FOR SLOWER RIDERS

1. People are generally very good about calling out when passing. But this is a skill that we always need to work on. We have had some riders complain about cyclists who do not move right when faster riders call out, “Rider, coming up!” or “Rider on your left!” Don’t be one of those riders guilty of the faux pas of “hogging” the ROW. **Please move to the right.**

2. Last week we wrote a special topic note about passing. Even if you don’t pass often and most people are passing you, **read this note.** The slower riders out of **courtesy** and **safety** should move right. You never want to force a cyclist in a nice wide ROW to go into the street to pass you. Enough said.

3. When riding up hill, it is imperative that slower riders **keep right** pedaling both up and downhill. Let the faster riders pass you safely by moving right.

A slower rider going down hill on the left side of the lane or right of way can create a dangerous situation where a faster rider cannot slow down or move out of the way in time to avoid a collision.

3. We welcome slower riders in our club. With consistent practice, you will get stronger over time. One of the features that makes Ready2Roll Cycling unique is we never leave a slower rider behind. You will always have a SAG driver and most of the time a cyclist called the “turtle” with you or behind you.

Thank you for your support.
